

Some important considerations in preparation for the Classroom-Based Assessment in Wood Technology 2020/2021

This document relates to Classroom-Based Assessment 1 (CBA 1) entitled **Wood science in our environment** in Wood Technology within the academic year 2020/2021, but also addresses some important considerations for CBA 2 in Wood Technology.

1. What are the Classroom-Based Assessments in Wood Technology?

There are two Classroom-Based Assessments in Wood Technology. They are assessed at a common level. The Classroom-Based Assessments for Wood Technology are:

CBA 1: Wood science in our environment – undertaken in year 2 during a maximum of 3 weeks

CBA 2: Student self-analysis and evaluation – undertaken in year 3 during a maximum of 3 weeks

2. When do the Classroom-Based Assessments in Wood Technology take place?

The Classroom-Based Assessments in Wood Technology are scheduled to be undertaken by students in a defined time period within class contact time to a national timetable as advised by the National Council for Curriculum and Assessment (NCCA) in the school calendar.

The arrangements for 2020/2021 Classroom-Based assessments can be accessed [here](#)

3. Can students work together on CBA 1 (Wood science in our environment)?

Students can collaborate, but each student must present an individual piece of work.

Junior Cycle Wood Technology, Guidelines for the Classroom-Based Assessments, Page 8

4. Does the student submission for CBA 1 follow a prescribed format/layout?

Students will capture the various stages of the Classroom-Based Assessment through a learning log that will be presented as part of their final submission. The learning log can be produced in a suitable format, to be decided upon in agreement with the teacher that captures the students' work throughout the Classroom-Based Assessment. Students may present models, artefacts, and any other form of evidence to accompany the learning log to further communicate their findings if they deem it necessary.

Junior Cycle Wood Technology, Guidelines for the Classroom-Based Assessments, Page 9

Students should be encouraged to identify which information best communicates their work and choose the most suitable medium in which to present it.

5. Can all students within a class group undertake the same topic for CBA 1?

The Wood Technology Guidelines for the Classroom-Based Assessments suggest that the students explore topics and ideas that are of interest to them and they should be encouraged to identify relevant links between classroom learning and everyday life – each student must present an individual piece of work.

6. When should the Features of Quality be shared with students for CBA 1?

At an appropriate moment in their learning, students should be familiarised with the Features of Quality that will be used to judge the quality of their work.

Junior Cycle Wood Technology, Guidelines for the Classroom-Based Assessments, Page 11

The use of formative assessment practices throughout the students’ learning journey will scaffold students in developing their understanding of quality in their work and support their understanding of the Features of Quality when the CBA is being undertaken. The use of success criteria for ongoing assessments will best support this development.

7. What provisions should be made for students with special educational needs (SEN)?

Where a school judges that a student has a specific physical or learning difficulty, reasonable supports may be put in place to remove, as far as possible, the impact of the disability on the student’s performance in Classroom-Based Assessments. These supports e.g. the support provided by a special-needs assistant or the support of assistive technologies, should be in line with the arrangements the school has put in place to support the student’s learning throughout the year.

8. Should feedback on CBA 1 be provided to students?

Providing effective feedback is a crucial step in Wood science in our environment to support learning. Students will be informed of the Descriptor they have been awarded once the Subject Learning Assessment Review (SLAR) meeting has taken place and its outcomes have been processed. However, effective feedback goes beyond the naming of the Descriptor awarded. Feedback on the strengths of the student’s work, and on areas for improvement can be used to support their future learning.

Junior Cycle Wood Technology, Guidelines for the Classroom-Based Assessments, Page 19

9. How long should CBA 1 material be stored for?

Once the SLAR is completed, provisional descriptors have been reviewed and final descriptors awarded, the work is given back to the student and does not need to be stored.

10. Is there any flexibility around the timing of CBA 1 given the current situation in schools?

The NCCA have published a document containing information regarding Classroom-Based Assessments for the school year 2020/2021. This document can be accessed by scanning or clicking the QR code across.

NOTE: This document is a summary of some important considerations in preparation for the Classroom-Based Assessments. For full details on the Classroom-Based Assessments teachers are encouraged to refer to the: [Junior Cycle Wood Technology Guidelines for the Classroom-Based Assessments](#)
